## THE CLAIMS

- 1 1-12. (cancelled)
- 1 13. (currently amended) A cladding tube for nuclear fuel, the cladding tube being made of a
- 2 zirconium-based alloy suitable for use in a corrosive environment where it is subjected to
- increased radiation, the alloy having a quality and impurity level, including up to 1600 ppm O
- 4 ppm and up to 120 ppm Si, suitable for use in nuclear reactors, the alloy consisting essentially of:
- 5 0.65-1.6 percent by weight Nb;
- 6 0.3-0.6 percent by weight Fe;
- 7 0.65-0.85 percent by weight Sn;
- 8 0.0-0.20 percent by weight Ni;
- 9 0.0-0.60 percent by weight Cr; and
- the balance being Zr.
- 1 14-21. (canceled)
- 1 22. (currently amended) The <u>cladding tube</u> component according to claim 13 21, wherein at
- 2 least a part of an inner circumference of the cladding tube is provided with component comprises
- a layer of a material that is more ductile than the alloy.
- 1 23. (currently amended) The cladding tube component according to claim 22, wherein the
- 2 layer comprises a zirconium-based alloy having a total content of alloying elements that does not
- 3 exceed 0.5 percent by weight.
- 1 24-34. (canceled)

- 1 35. (new) A cladding tube for nuclear fuel, the cladding tube being made of a zirconium-
- 2 based alloy suitable for use in a corrosive environment where it is subjected to increased
- 3 radiation, the alloy having a quality and impurity level, including, optionally, 500-1600 ppm O
- and, optionally, 50-120 ppm Si, suitable for use in nuclear reactors, the alloy consisting
- 5 essentially of:
- 6 0.65-1.6 percent by weight Nb;
- 7 0.3-0.6 percent by weight Fe;
- 8 0.65-0.85 percent by weight Sn; and
- 9 the balance being Zr.
- 1 36. (new) The cladding tube according to claim 35, wherein at least a part of an inner
- 2 circumference of the cladding tube is provided with a layer of a material that is more ductile than
- 3 the alloy.
- 1 37. (new) The cladding tube according to claim 36, wherein the layer comprises a
- 2 zirconium-based alloy having a total content of alloying elements that does not exceed 0.5
- 3 percent by weight.

## Attorney Ref. 19378.0011

- 1 38. (new) A cladding tube for nuclear fuel, the cladding tube being made of a zirconium-
- 2 based alloy suitable for use in a corrosive environment where it is subjected to increased
- radiation, the alloy having a quality and impurity level, including 500-1600 ppm O and 50-120
- 4 ppm Si, suitable for use in nuclear reactors, the alloy consisting essentially of:
- 5 0.65-1.6 percent by weight Nb;
- 6 0.3-0.6 percent by weight Fe;
- 7 0.65-0.85 percent by weight Sn; and
- 8 the balance being Zr.
- 1 39. (new) The cladding tube according to claim 38, wherein at least a part of an inner
- 2 circumference of the cladding tube is provided with a layer of a material that is more ductile than
- 3 the alloy.
- 1 40. (new) The cladding tube according to claim 39, wherein the layer comprises a
- 2 zirconium-based alloy having a total content of alloying elements that does not exceed 0.5
- 3 percent by weight.
